SENIOR
DEDICATION

As we look back over the last four years, a myriad of images drifts before us, some blurred and indistinct, others shining with perpetual clarity. Oldies Nights ... final exams ... soccer victories ... chapter outlines ... and through them all, the faces and words of our professors who have taught us, learned with us, laughed with us.

The Senior class dedicates this page to three such professors who have given of themselves so generously. It is their professionalism, talent, and loyalty which enable Babson to call its tradition one of excellence.

Dr. Wallace Mors came to Babson in 1948, bringing with him a wealth of knowledge in the field of Finance. Serving as Dean of Faculty from 1963 to 1965 and as Chairman of the Finance Division from 1963 to 1976, Dr. Mors has established a reputation among fellow faculty members and administrators as being truly a "professor's professor." And among students? Well, one may think that a lecture dealing with actuarially computed finance charges could lack luster. Right? Wrong! Certainly not — when a description of Arizona as "2 million acres of kitty litter" is strategically inserted among burdensome statistics! Even Babson's natives of Arizona genuinely appreciate the dedication, the thoroughness, and the independent thinking that has characterized all of Dr. Mors contributions to our college and to the community.

Dr. Robert Wertheimer has been teaching Economics in Library 1 ever since we can remember. He came to Babson in 1947 and has impressed us anew, each semester, with his dedication to students and to the world's economic problems.

Dr. Wertheimer is one of the most distinguished and knowledgeable economists in the field of International Trade and Finance, and complete with 1930's vintage hat and coat, has added as a renowned educator, distinction to our college. He has taught us that the world is not perfect. He has shared his extensive research and worldwide experiences with us, and has instilled in us not only a respect for the study of Economics, but a respect for the man, our teacher, as well.

The name Dr. Bryce Prindle has been synonymous with the word "science" at Babson since his arrival in 1960. Dr. Prindle, himself a marine biologist, has worked hard at teaching science to nonscience majors, and has been a willing and loyal servant of the entire Babson community. How many ping-pong balls does it take to fill Knight
Auditorium? We puzzled over that, and today, well, we still puzzle over that one, and how many drops of water fill the Babson swimming pool. We'll never be scientists, that's for sure, but Dr. Prindle has served as a catalyst to our increased awareness and understanding of scientific discovery and its significance in human welfare.

The Senior class wishes to recognize the dedication, enthusiasm, and integrity of these three gentlemen, who have taught us, through both words and example, the true qualities of leadership.

With deepest gratitude, we thank them.
